SKILLS

- **Languages:** Java, Python, JavaScript, Angular, CPP
- **Web Development:** HTML and CSS, Spring, Spring Boot
- **Machine Learning:** TensorFlow, OpenCV, NLP Basics
- **Tools/Platforms:** MySQL, Docker, Git, GitHub
- **Coursework:** Data Structure & Algorithms, OOP, Computer Architecture
- **Soft Skills:** Committed, Detail-oriented, Learning new technologies, Adaptability

INTERNSHIP

Terafac Technologies | Ai & Computer Vision Intern

August 2025 – Nov 2025

- **About:** Validated motion paths, joint configurations, and reachability for ABB and FANUC robot simulators across 100+ robot poses, ensuring 99% pre-execution accuracy and reducing simulation errors by 40%. Developed C++ integration layers (e.g., wrapper.cpp) to bridge kinematics solvers with motion pipelines. Developed AI vision models for welding gap detection (tacked-joints, welding-objects) with 96% accuracy, preprocessing/annotating 20k+ images via OpenCV, NumPy, and Roboflow Inference SDK.
- **Tech stacks used:** C++, Python · Robo Guide · Fanuc · Socket

PROJECTS

- **MedFlow — Distributed Pharmacy Management Backend:** Mar 2026 – present
Architected a full-stack pharmacy backend **using 8 independently deployable microservices**, exposing **33+ REST APIs** across customers and admin workflows with **Netflix Eureka-based service discovery** and **OpenFeign inter-service communication**. Implemented **JWT-based authentication** with Spring Security, securing all APIs across role-based access control for CUSTOMER and ADMIN roles. Integrated Circuit Breaker patterns for fault tolerance, and built an APM monitoring dashboard using Prometheus and Grafana tracking real-time JVM, CPU, and HTTP metrics.
Tech: Java 17, Spring Boot, Spring Cloud, Microservices, Spring Security, JWT, MySQL, Netflix Eureka, OpenFeign, Docker Compose, Prometheus, Grafana, JUnit 5, REST APIs
- **Malaria Cell Detection using CNN** July 2025 – Aug 2025
Built a CNN-based model to classify **27,000+** cell images into infected and uninfected classes using OpenCV and TensorFlow.
Engineered a deep neural architecture with **Batch Normalization** and **Dropout** to reduce overfitting and improve generalization.
Achieved high classification accuracy using **Adam optimizer** and categorical cross-entropy; trained and evaluated
Tech: Python, TensorFlow, CNN

CERTIFICATES

- Supervised Machine Learning: Regression and Classification (Coursera) Dec 2024
- Deep Learning (NPTEL) Nov 2024
- Mastering Data Structures & Algorithms using C and C++ (Udemy) Dec 2023
- Database and SQL for Data Science with Python (Coursera) Nov 2023

ACHIEVEMENTS

- **Competitive Programming Batch:** January 2024
Selected for the Competitive Programming (CP) batch in both Summer and Winter PEP classes, ranking among the top 10% of students in the university.
- **GFG & LeetCode Top 10%:**
Solved **500+** DSA problems on leetcode & GFG Combined.

EDUCATION

- **Lovely Professional University**
Bachelor of Technology - Computer Science and Engineering; CGPA: 8.50

Punjab, India
2022-2026
